DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-2, 4-11 drawn to a promoter: SEQ ID NO: 3.

Group II, claim(s) 3-11 drawn to an intron: SEQ ID NO: 1

- i. Vector pBinS/FAD2-GUS
- ii. Vector pSiW6-P2.4

In addition to I or II above, applicant must further elect i. OR ii.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions are linked by the technical feature of a seed specific promoter.

However, this technical feature is not special because it does not constitute an advance over the prior art. There are numerous examples of seed-specific expression of seed storage protein genes in transgenic dicotyledonous and monocotyledonous plants. (See US-5530186; Hitz et al, column 13, 3rd paragraph).

Furthermore, the invention of Group I, a first product, requires a single copy of SEQ ID NO: 3 only, each not required by any other Group.

Furthermore, the invention of Group II, a first product, requires a single copy of SEQ ID NO: 1 only, each not required by any other Group.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicants are reminded that nucleotide sequences encoding different proteins or comprising different regulatory sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Applicant is required to select a single nucleotide sequence. This requirement is not to be construed as a requirement for an election of species, since each nucleotide sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.
